

# CAMERON ANDERSON

Dear Hiring Team,

I am a graduate of Swinburne University, completing my degree in 2023 after studying a Bachelor of ICT and am now looking for a career opportunity in software development or IT support.

Being in the early stage of my career, the organisation and role I commit to will play a big part in shaping my professional growth. Having worked at Village Cinemas for 11 years, I am eager to find another role that I can commit to long term and a team I can develop alongside. I am ideally seeking a position within Melbourne's South East to support a positive work life balance and a role I can be very engaged in. I am eager to find a role where I make a meaningful difference in people's lives, where I can feel rewarded by my work.

Since graduating from university, I have had some opportunities to take on roles in IT which helped me decide on pursuing an engineering role. In 2023 I spent 6 months as a graduate software consultant for Halo Service Solutions. HaloPSA is a help desk platform sold to MSPs where my role included providing technical support to existing clients, and consulting for new clients to build their instance of HaloPSA to meet each client's unique requirements. There was a mix of virtual and on site consulting which meant being able to communicate effectively in different environments and represent the company with professionalism and knowledge. Although this was a fantastic job for my development, and I was being given more responsibility, I felt this position was not right for me and decided to look for a different role.

This year I have had an opportunity within Village Cinemas to take on a software engineering project which involved building a python script to send and receive MQTT protocol messages. This was a unique challenge for me, I had not used python before nor was I familiar with MQTT but I found the process very rewarding and it reinforced the interest I had in software engineering, which I now want to pursue further. With this in mind I have been learning React from The Odin Project, an online course which has been extremely effective and helped me begin making small projects. I am driven to continually build on my knowledge and apply this attitude to any position as I seek to excel.

I have extensive management experience, having been a manager at Village Cinemas with a wide range of portfolio responsibilities for the past 8 years. These portfolios have included finance and compliance, stock management, training and development at all levels and site technical manager. The Fountain Gate location is among the 3 busiest cinemas in the country so the high standards and diligent work ethic I brought to each portfolio were a key factor in driving the success of our site and fostering a driven and well trained team.

I am very conscientious, taking great pride in the success of my own work and as part of a larger team. I am self-motivated and dedicate myself to upholding a high standard of work with a strong sense of accountability. I believe my work ethic will be highly valued, especially given the hybrid nature of IT roles where I will need to meet objectives and communicate effectively both in the office and while working virtually.

I am very excited about this role and would love to discuss the potential for joining the team, so I hope to hear from you.

Yours Sincerely,

Cameron Anderson
